Research Review

T. Decaëns: Macroecological patterns in soil communities 287–302

Meta-Analysis

C. J. B. Sorte, S. L. Williams and J. T. Carlton: Marine range shifts and species introductions: comparative spread rates and community impacts 303–316

Research Papers

P. Pyšek, S. Bacher, M. Chytrý, V. Jarošík, J. Wild, L. Celesti-Grappo, N. Gassó, M. Kenis, P. W. Lambdon, W. Nentwig, J. Pergl, A. Roques, J. Sádlo, W. Solarz, M. Vilà and P. E. Hulme: Contrasting patterns in the invasions of European terrestrial and freshwater habitats by alien plants, insects and vertebrates 317–331

M. Winter, I. Kühn, F. A. La Sorte, O. Schweiger, W. Nentwig and S. Klotz: The role of non-native plants and vertebrates in defining patterns of compositional dissimilarity within and across continents 332–342

S. Xiao, M. Zobel, R. Szava-Kovats and M. Pärtel: The effects of species pool, dispersal and competition on the diversity–productivity relationship 343–351

K. Safi and N. Pettorelli: Phylogenetic, spatial and environmental components of extinction risk in carnivores 352–362

S. C. Burgess, K. Osborne and M. J. Caley: Similar regional effects among local habitats on the structure of tropical reef fish and coral communities 363–375

S. A. Bohlman: Landscape patterns and environmental controls of deciduousness in forests of central Panama 376–385

G. D. Powney, R. Grenyer, C. D. L. Orme, I. P. F. Owens and S. Meiri: Hot, dry and different: Australian lizard richness is unlike that of mammals, amphibians and birds 386–396

E. R. Selig, K. S. Casey and J. F. Bruno: New insights into global patterns of ocean temperature anomalies: implications for coral reef health and management 397–411

Macroecological Methods

M. A. MacNeil and N. A. J. Graham: Enabling regional management in a changing climate through Bayesian meta-analysis of a large-scale disturbance 412–421

Front cover: In Europe, there are two ecologically distinct groups of alien species with strikingly different habitat affinities. While alien plants (top left) and insects (bottom left) are concentrated in human-made, urban or cultivated habitats, invasive vertebrates (centre and top right) are more evenly distributed among habitats, with aquatic and riparian, woodland, and cultivated land most invaded. Centre: *Raccoon* (*Procyon lotor*) in a riparian habitat in Poland (Photo: Magdalena Bartoszewicz). Top left: *Heracleum mantegazzianum* invading wasteland in the Czech Republic (Photo: Petr Pyšek). Bottom left: *Harmonia axyridis*, clustering in winter on a bunker in the Netherlands (Photo: Antoon J.M. Loomans). Top right: Mink (*Mustela vison*) in the Narew National Park in Poland (Photo: Janusz Kupryjanowicz). See Pyšek *et al.*, pp. 317–331.

Erratum to cover caption of volume 19, number 2: The photographer of the butterfly *Coenonympha arcania* on the front cover of the previous issue of the journal was David Gutiérrez and not Javier Gutiérrez Illán.
