ITP is one of the most recognized international symposium series in the field of separation science. As the previous editions, the *29th International Symposium on Electro- and Liquid Phase-Separation Techniques (ITP 2023)* will address the latest developments and advances in all areas of electro- and liquid-phase separation techniques in multiple disciplines.

The ITP 2023 will continue the tradition of the series by updating attendees on the advances in different separation techniques and their applications in various areas with an emphasis on *pharmaceutical, clinical, food and environmental analysis*.

One of the major aims of the symposium is to provide a forum for high-level scientific exchanges between analytically oriented scientists from the whole world in a friendly atmosphere. Special attention will be devoted to young scientists' presentations and posters.

The organizers look forward to seeing you in San Felice Circeo!

1. All electromigration techniques in capillary or microchip format:

- a. zone electrophoresis,
- b. isotachopheresis,
- c. isoelectric focusing,
- d. affinity electrophoresis,
- e. electrokinetic chromatography,
- f. electrochromatography.

2. Biomedical analysis;

3. Chiral separations;

4. Environmental analysis;

5. Food analysis;

6. Liquid chromatography and Capillary Electrophoresis:

- a. Fundamentals of CE and LC,
- b. Multidimensional separations,
- c. Coupling of CE and LC methods with MS.

7. Micro- and nano-fluidics;

8. Novel Instrumentation;

9. Pharmaceutical analysis;

10. Sample preparation:

- a. Liquid phase microextraction,
 - b. Solid phase microextraction,
 - c. Green sample preparation approaches,
 - d. Neoteric solvents for extraction,
 - e. Last generation sorbents for SPE.
