

Systematic entomology I

Year 4.,5.
9 credits

Winter semester

lecture 104 hours/semester

Doc., CSc., Jitka Vilímová & RNDr., PhD., Jakub Prokop

Department of Zoology

Annotation

Review of higher classification, relationships and phylogeny of Hexapoda taxa and Insecta taxa, except Oligoneoptera (see Systematic entomology II). Introduction to palaeoentomology. Characterization of world entomofauna from all orders mentioned above, from morphological, biological, ecological and economical point of view. Advanced course from systematic entomology obligatory for specialization Entomology, precondition or parallelly – General entomology.

Syllabus

Relationships, phylogeny and higher classification of Hexapoda, Insecta, and all insects orders and groups except Oligoneoptera.

Different types of insect metamorphosis, general review of reproduction and biology. Introduction to palaeoentomology.

Morphological, biological, and ecological characterization, and higher classification of individual orders and groups:

Hexapoda, Parainsecta = Ellipura, Protura, Collembola, Campodeina, Japygina.

Insecta, Monocondylia, Archaeognatha, Dicondylia, Zygentoma.

Pterygota, Palaeoptera, Ephemeroptera, Odonata.

Perlodea, Plecoptera, Embioptera, Dermaptera.

Blattopteroid complex, Isoptera, Blattoptera, Mantodea.

Orthopteroid complex, Grylloblattodea, Phasmatodea, Ensifera, Caelifera.

Paraneoptera, Zoraptera, Aceraria, Psocidea, Psocoptera, Phthiraptera, Amblycera, Ischnocera, Anoplura, Rhynchophthirina.

Condylognatha, Thysanoptera, Hemiptera, Coleorrhyncha, Heteroptera, Archaeorrhyncha, Clypeorrhyncha, Sternorrhyncha.
